EVALUATION OF SCHOLARLY ACTIVITY AND RESEARCH

TENURED AND TENURE-TRACK FACULTY (FACULTY HANDBOOK 6-13-18)

Quality, Impact and Value of work must be addressed by the faculty within a two page narrative and will be used for evaluation purposes by each level of review. For the purposes of an annual review the faculty member should address items related to the review period. For other cases, such as a third year or pre-tenure review individuals should address the full scope of their scholarship under the period of review. This narrative is used as an opportunity to articulate the quality, impact and value of your scholarship to the discipline. The narrative must address items 1-3 below, and items 4-11 of the faculty handbook as applicable.

1. Publications:
    - Address the quality, impact and value of your scholarly publications (books, book chapters, manuscripts, etc) to the discipline
    - Identify the research theme and which scholarly activity products and publications support this theme
    - Comment on the reputation of the journals in which you have published and comment on the extent (type) of the external peer review (open, single-blind, double-blind, etc) of the articles
    - Describe the authorship role and level
2. Presentations:
    - Address the quality, impact and value of your presentations to the discipline
    - Comment on the type of presentation (i.e. keynote, podium, platform, poster)
    - Comment on the type of conference/meeting (regional, national, international)
    - If applicable,
        - Describe the extent of the external review process before acceptance of the presentation
        - Address the prestige associated with having a "paper" accepted for presentation at the particular meeting
3. Grants and Contracts (include all submissions)
    - Address the quality, impact and value of your grants and contracts to the discipline
    - Address the availability of funding opportunities linked to your area of research
    - Describe how your scholarly work leads to funding opportunities in the defined area
    - Address the effectiveness with which you have worked with colleagues and your designated role on the grant (PI, Co-PI, Co-I, collaborator, consultant or other major role)
    - If feedback is provided, include information related to the feedback received from the funding source and the funding award percentages for the agency
    - If applicable,
        - Address if the funding contributed to support for graduate assistants, post-doctoral fellows, and/or purchased release time

*Consult items 4-11 in the faculty handbook (Faculty Handbook: Evaluation of Scholarly Activity and Research) to incorporate aspects which may be applicable.
